

# Machine Learning

## CS7052

### Lecture 1

Dr. Elaheh Homayounvala

Autumn, 2023-2024, week 1

# Outline of today's lecture

- About me
- About you
- About the Machine Learning (ML) module
  - VLE (Weblearn)
  - Assessment
  - Content

# About me

- My name is Dr. Elaheh Homayounvala
- I am a PhD graduate of  
King's College London  
University of London

# About me

- teaching experience in HE
- doing research

# About me

Research interests:

- How technology can be adapted to the needs and preferences of users?
- User Modeling and Personalisation
- Machine Learning
- Artificial Intelligence
- Technology Acceptance and more

# About you

- Your background?
- Your first degree?
- Any work experience?
- Your current course at London Met?
- Why this course?
- Your motivations and goals?

# About the ML module

- Timing of lectures and workshops
- VLE, Weblearn
- Reading list
- Assessment

# About the ML module, timing

- Lectures Wed 9-11am
- Workshops Wed 11-13pm
  - Jupyter notebooks
  - Python, numpy, pandas, sklearn, matplotlib and more
  - Lots of examples and materials on the web (e.g. Kaggle, scikit-learn, ... )

# About the ML Module

- Module page on the VLE
- Weblearn tour

The screenshot shows the homepage of the CS7052 Machine Learning module on Weblearn. At the top, it displays the module code 'CS7052\_2023-24\_SEM1' and the title 'CS7052 Machine Learning - Autumn 2023-24'. Below the title is a navigation bar with links for Content, Calendar, Announcements, Discussions, Gradebook, Messages, and Groups. The 'Content' link is underlined, indicating the current page.

The main content area is divided into two columns. The left column, titled 'Module Staff', lists two instructors: Mona Abdalgayed (Instructor) and Elaheh Homayounvala (Instructor), each with a small profile picture. The right column, titled 'Module Content', contains a section titled 'About the Module'. This section includes a brief introduction: 'Hello and welcome to Machine Learning module page on Weblearn. You can find teaching material including slides for each week lecture and workshop instructions on this page. Please check this page regularly as I make teaching content available on a weekly basis. I hope you enjoy learning this module. Module leader: Dr Ela Homayounvala BSc, MSc, PhD, FHEA, email: e.homayounvala@londonmet.ac.uk'. Below this, there are sections for 'Reading List', 'Panopto Folder', and 'Assessment', each with a status indicator 'Not started' and a dropdown arrow.

At the bottom of the page, there is a 'Week 1:' section with a brief description: 'I will give you an introduction to machine learning during the first lecture as well as covering topics such as assessments and Weblearn. During the workshop you will be introduced to Jupyter notebook and data processing using NumPy and Pandas.' A 'Not started' status indicator and a dropdown arrow are also present here. A question mark icon is located at the bottom right corner of the page.

# About the module, Assessment

- Coursework, 60%, week 11
- Exam, 40%, week 14-15

# Coursework

- The coursework focuses on applying a machine learning technique and doing data analysis, writing report and presenting results
- The students are divided in groups of two
- The coursework must be submitted by the end of week 11

# Coursework

- Each group is required to select one topic
- The group is expected to:
  - research into the selected topic
  - provide examples of how the technique can be used
  - provide a data driven example
  - write a report
  - present their research to other students

# Exam

The examination will test

- Your retention
- an understanding and insight drawn from the entire course.
- You will answer general questions
- and more detailed questions related to specific ML techniques, including analysis of data and results

# About the module, Intro to ML

- What we'll cover in this module
- What is Machine Learning?
- When do we use ML?
- Some applications of ML
- States of the art applications of ML
- Types of learning

# What we'll cover in this module

## **Supervised learning**

- Classification and Regression
- K-Nearest Neighbours (KNN)
- Linear Models for Classification and Regression
- Decision Trees
- Neural Networks
- Deep Learning

## **Unsupervised learning**

- Clustering
  - Dimensionality reduction
  - Feature Extraction
  - PCA
- 
- Essential Libraries and Tools
  - Model Evaluation and Improvement, Cross Validation
  - Legal and ethical issues related to ML
  - Linguistic Models, working with text data and more ...

# What is ML?

- Arthur Samuel (1959)  
" ... gives computers the ability to learn without being explicitly programmed
- Tom Mitchell (90s)  
"the study of computer algorithms that improve automatically through experience"

# What is Machine Learning?

“Learning is any process by which a system improves performance from experience.”

- Herbert Simon

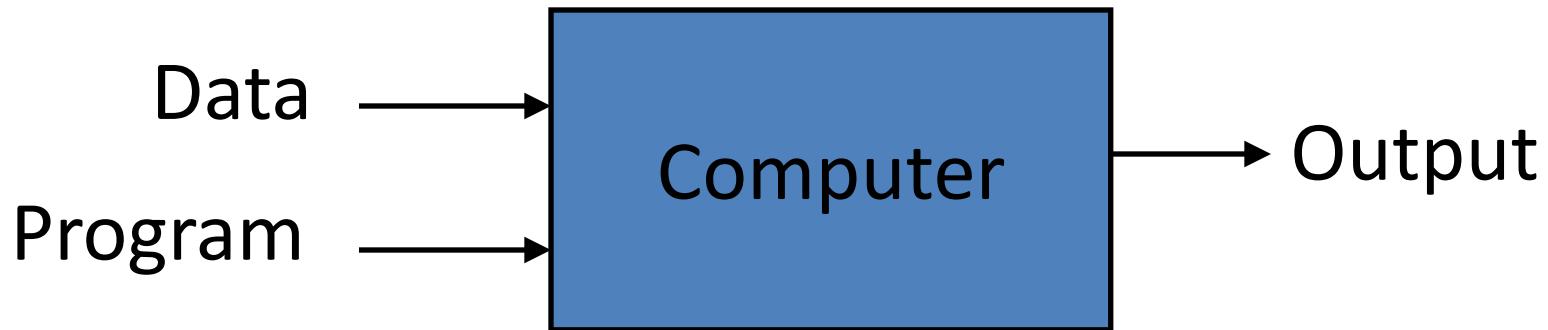

Definition by Tom Mitchell (1998):

Machine Learning is the study of algorithms that

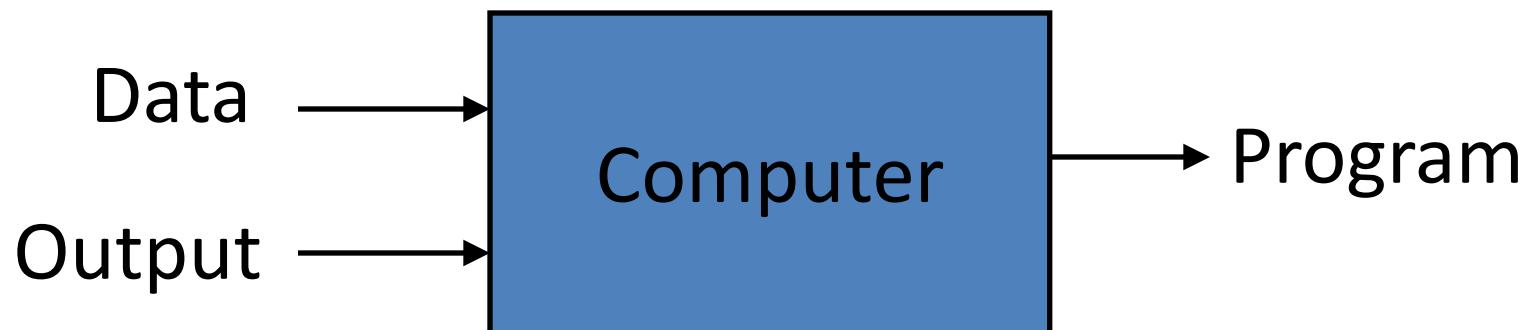

- improve their performance  $P$
- at some task  $T$
- with experience  $E$ .

A well-defined learning task is given by  $\langle P, T, E \rangle$ .

## Traditional Programming

## Machine Learning

# Example 1

- A house price prediction ML program that predicts the price of a house based on data related to recently sold houses

Can you identify

- T
- E
- And P
- In this example

# Example 2

- An email ML program that learns how to filter spam according to emails you do or do not mark spam
- Can you identify
  - T
  - E
  - And P
  - In this example

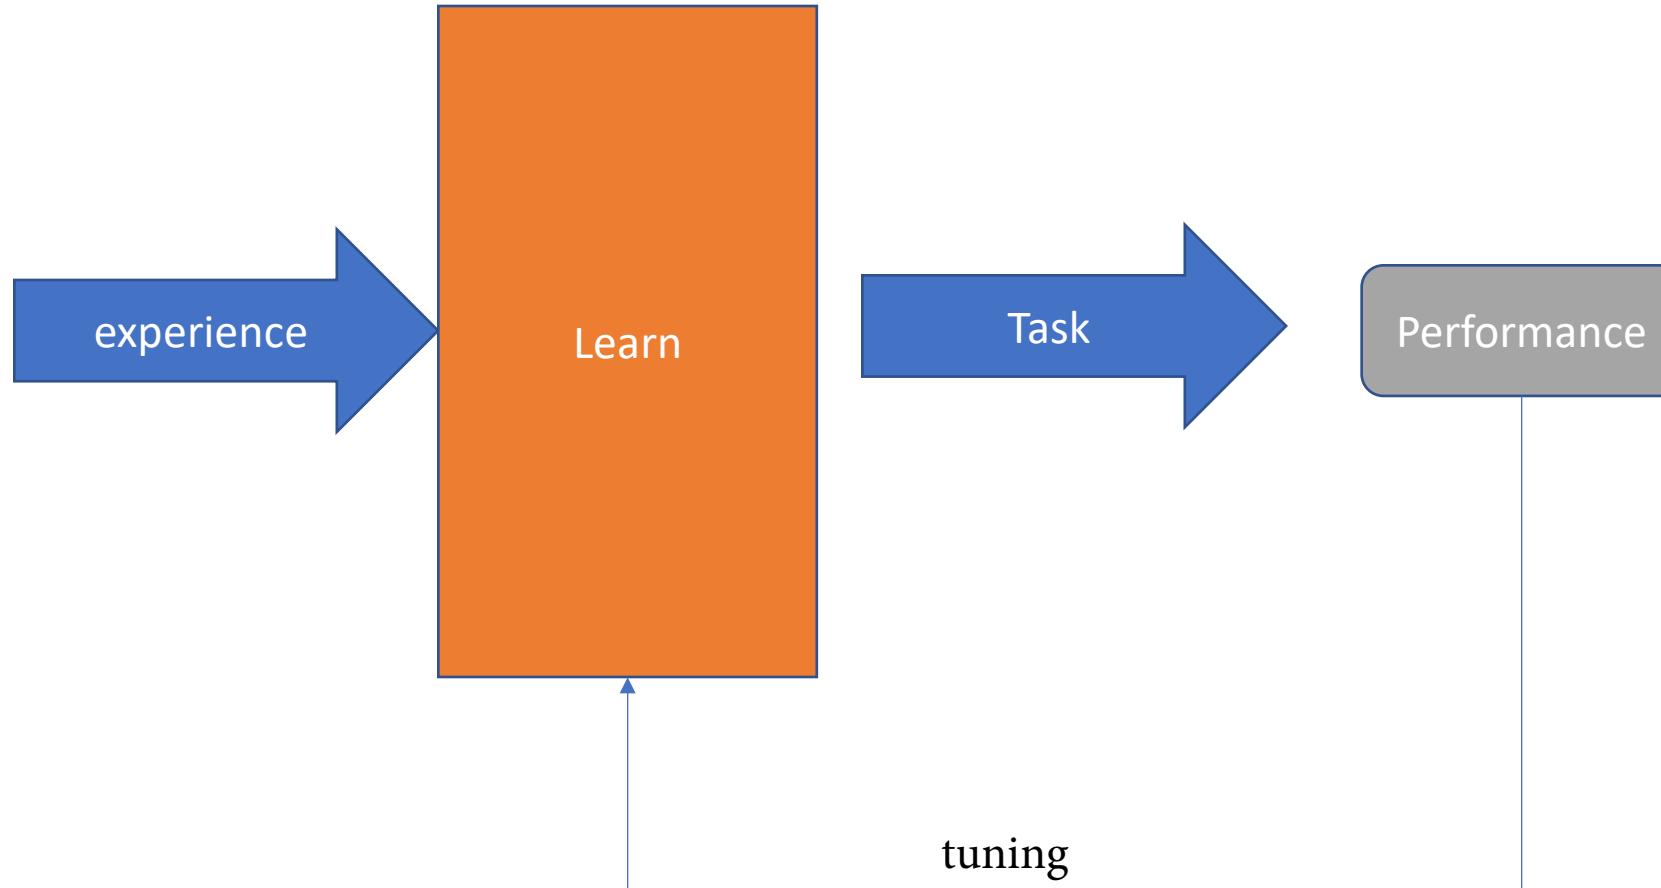

# Example 3

- A loan approval ML program for a bank or a lender that approves or denies applicants' loan requests

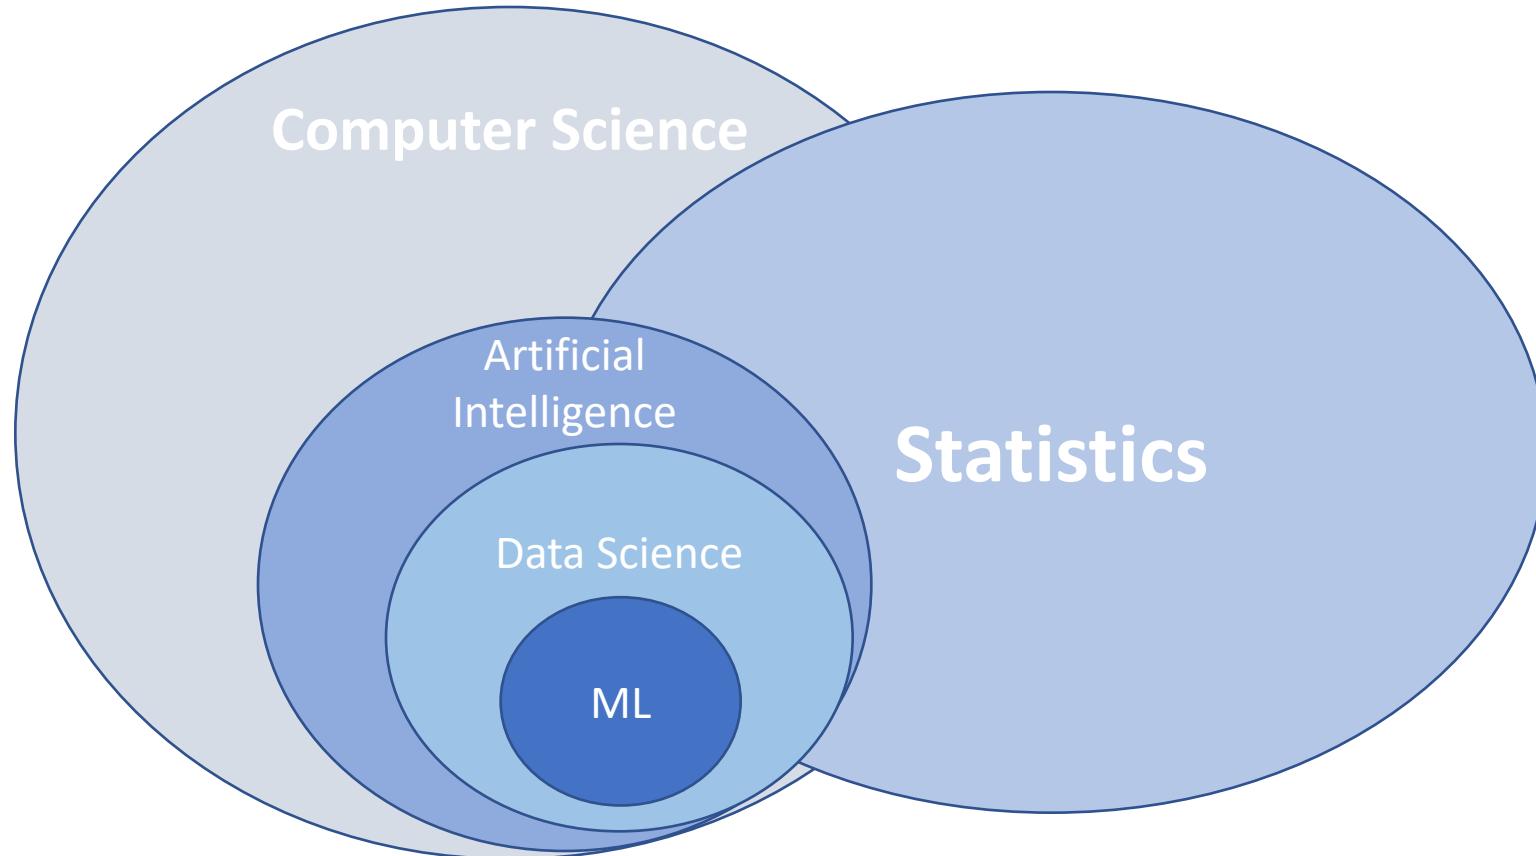

Can you identify

- T
- E
- And P
- In this example

# What is ML?

# ML and Artificial Intelligence

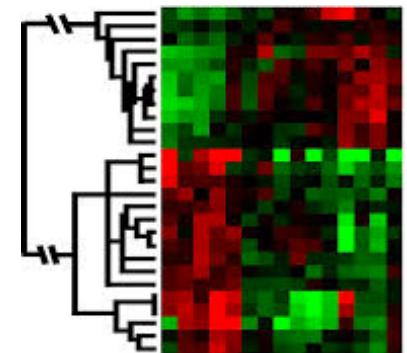

# When do we use Machine Learning?

- A pattern exists
- We do not know it mathematically
- We have data on it

# When Do We Use Machine Learning?

ML is used when:

- Human expertise does not exist (navigating on Mars)
- Humans can't explain their expertise (speech recognition)
- Models must be customized (personalized medicine)
- Models are based on huge amounts of data (genomics)

Learning isn't always useful:

- There is no need to “learn” to calculate payroll

A classic example of a task that requires machine learning:

It is very hard to say what makes a 2

0 0 0 1 1 1 1 1 2

2 2 2 2 2 2 3 3 3

3 4 4 4 4 4 5 5 5

6 6 7 7 7 7 8 8 8

8 8 8 8 9 4 9 9 9

# Some more examples of tasks that are best solved by using a learning algorithm

- Recognizing patterns:
  - Facial identities or facial expressions
  - Handwritten or spoken words
  - Medical images
- Generating patterns:
  - Generating images or motion sequences
- Recognizing anomalies:
  - Unusual credit card transactions
  - Unusual patterns of sensor readings in a nuclear power plant
- Prediction:
  - Future stock prices or currency exchange rates

# Sample Applications

- Web search
- Computational biology
- Finance
- E-commerce
- Space exploration
- Robotics
- Information extraction
- Social networks
- Debugging software
- [Your favorite area]

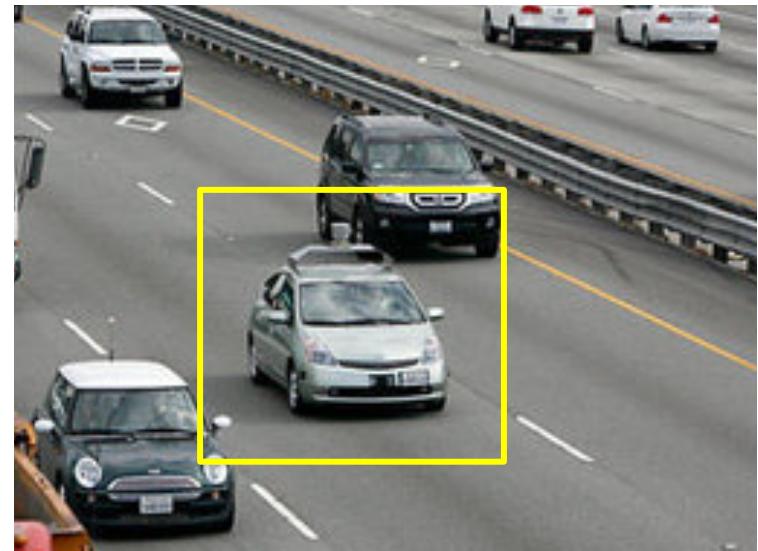

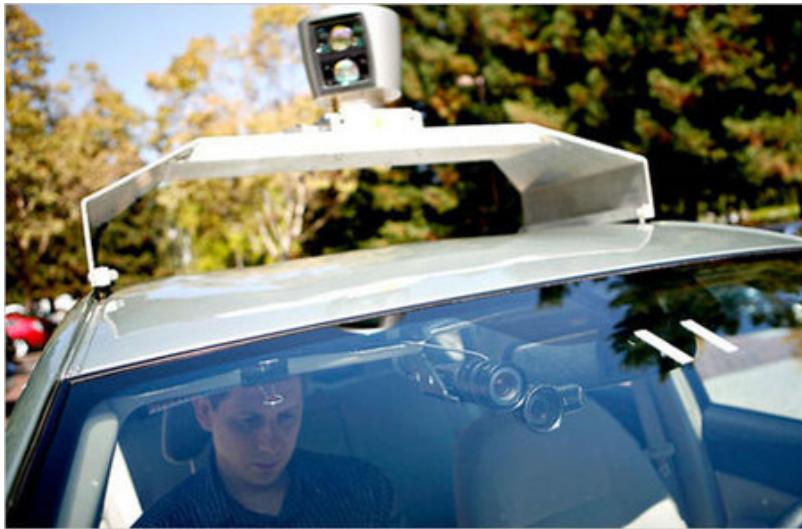

# Samuel's Checkers-Player

“Machine Learning: Field of study that gives computers the ability to learn without being explicitly programmed.” -Arthur Samuel (1959)

# State of the Art Applications of Machine Learning

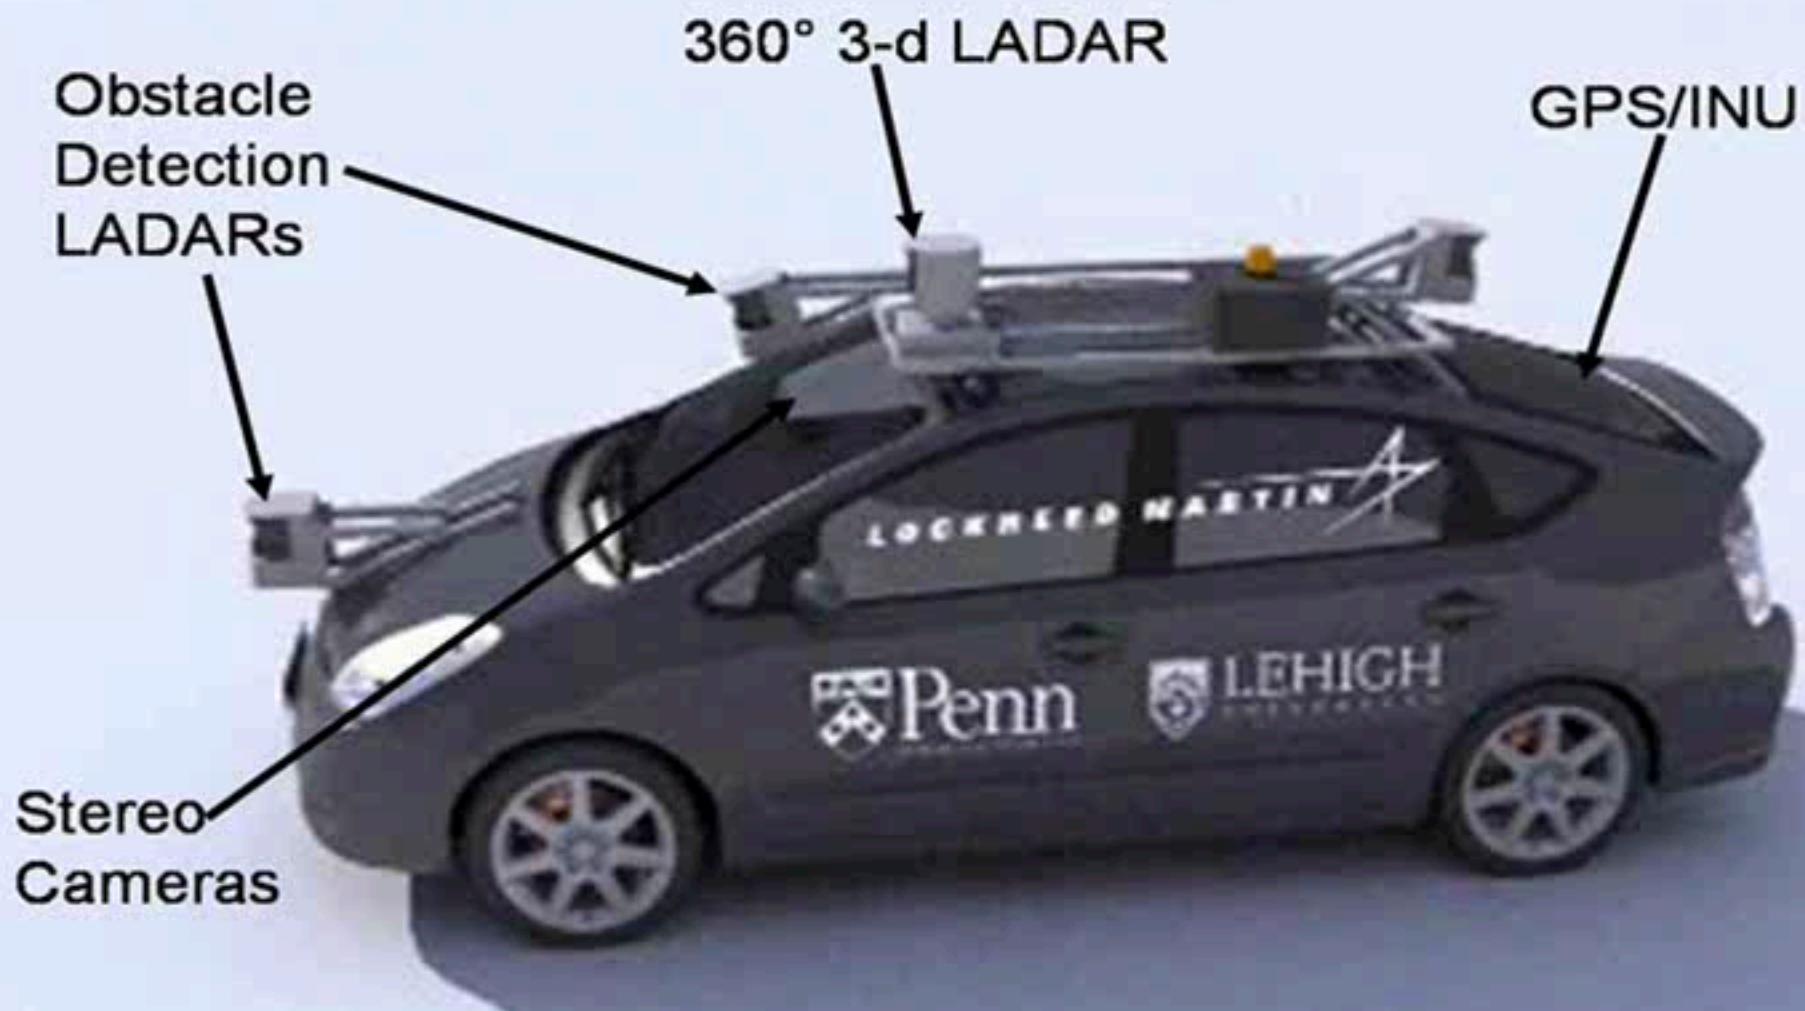

# Autonomous Cars

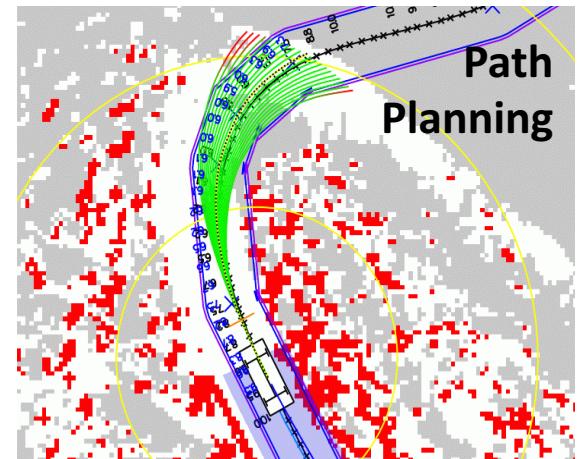

- Nevada made it legal for autonomous cars to drive on roads in June 2011
- As of 2013, four states (Nevada, Florida, California, and Michigan) have legalized autonomous cars

# Autonomous Car Sensors

# Autonomous Car Technology

# Deep Learning in the Headlines

BUSINESS NEWS

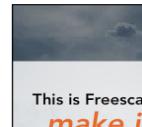

## Is Google Cornering the Market on Deep Learning?

A cutting-edge corner of science is being wooed by Silicon Valley, to the dismay of some academics.

By Antonio Regalado on January 29, 2014

How much are a dozen deep-learning researchers worth? Apparently, more than \$400 million.

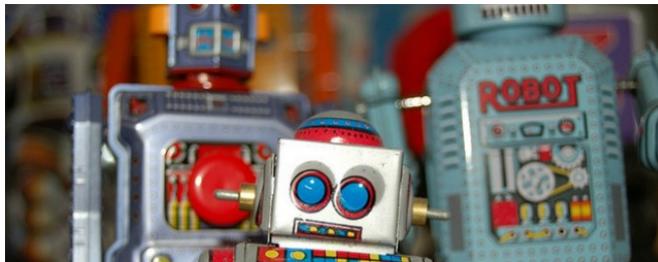

This week, Google [reportedly paid that much](#) to acquire [DeepMind Technologies](#), a startup based in London that has developed a program that can learn to play video games.

### The Race to Buy the Human Brains Behind Deep Learning Machines

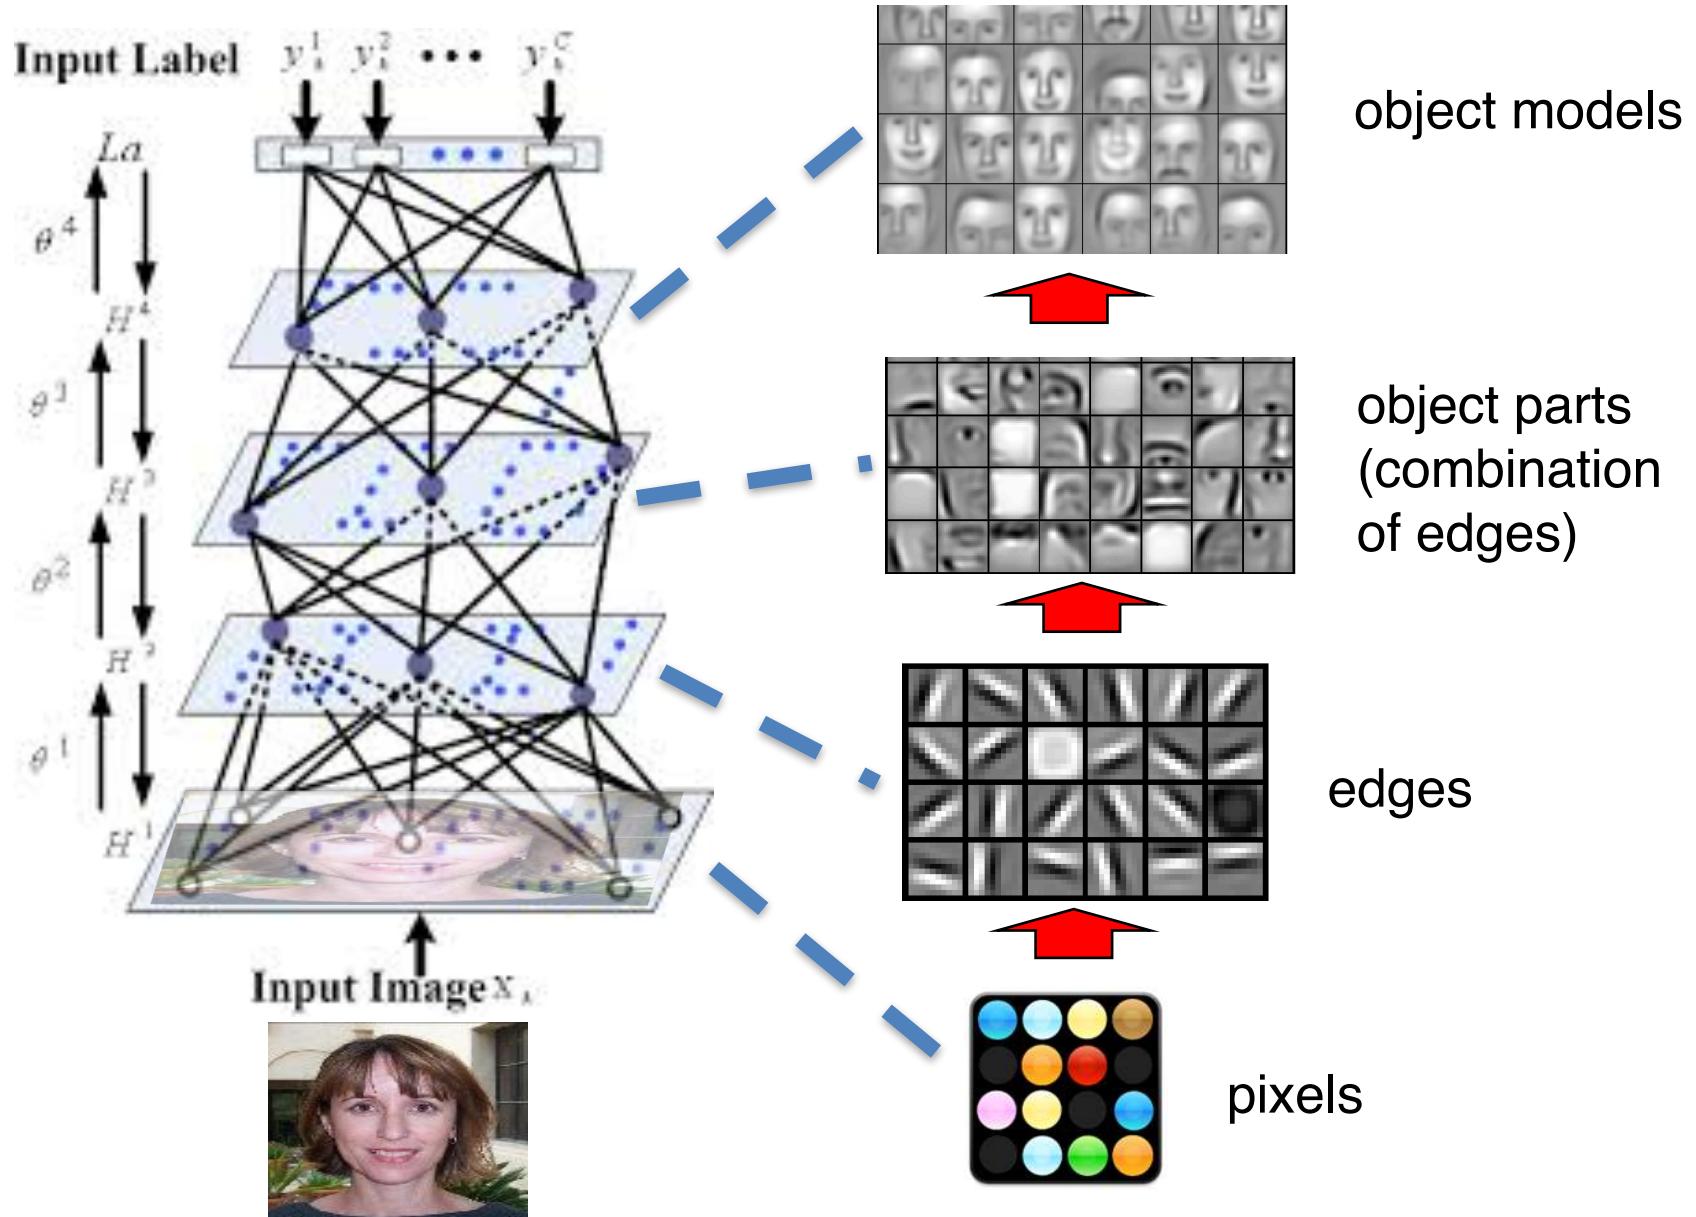

By Ashlee Vance [Twitter](#) | January 27, 2014

intelligence projects. "DeepMind is bona fide in terms of its research capabilities and depth," says Peter Lee, who heads Microsoft Research.

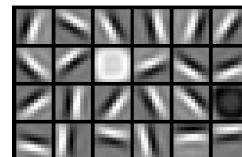

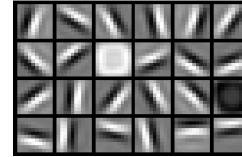

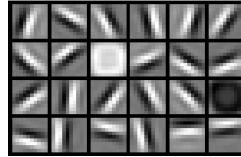

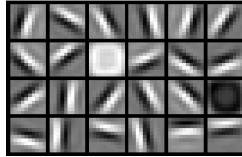

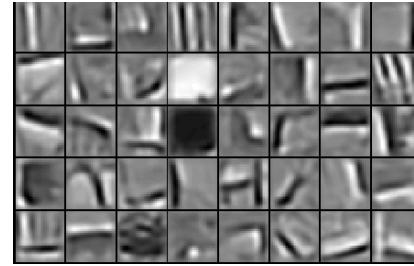

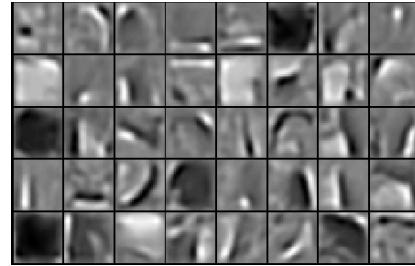

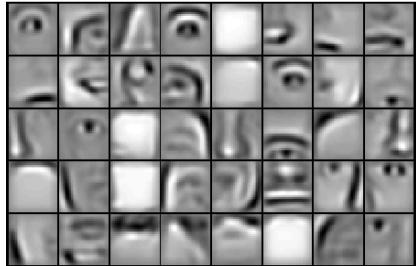

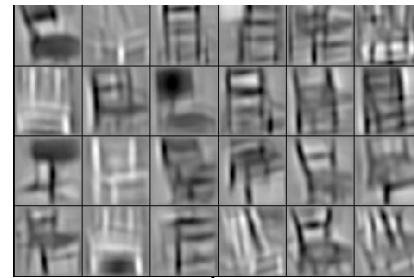

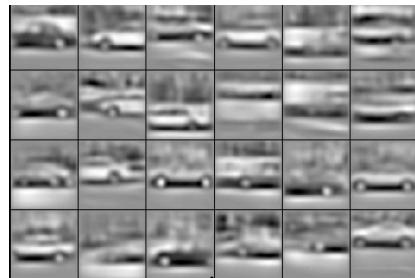

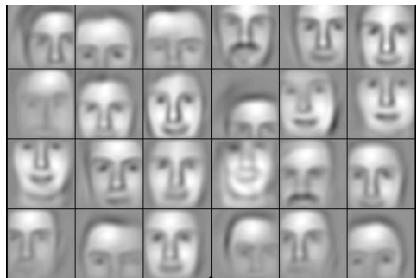

According to Lee, Microsoft, Facebook ([FB](#)), and Google find themselves in a battle for deep learning talent. Microsoft has gone from four full-time deep learning experts to 70 in the past three years. "We would have more if the talent was there to

A video still from a CNBC program. On the left, a man in a suit and tie, Matt Strelak, is speaking. On the right, there is a graphic overlay with the text 'DEEP LEARNING' and two bullet points: '» Computers learning and growing on their own' and '» Able to understand complex, massive amounts of data'. At the bottom, there is a banner with 'DATA ECONOMY' and 'DEEP LEARNING' repeated, along with logos for GE and NBC.

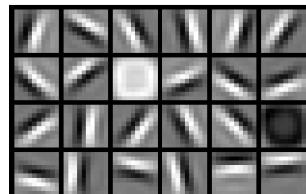

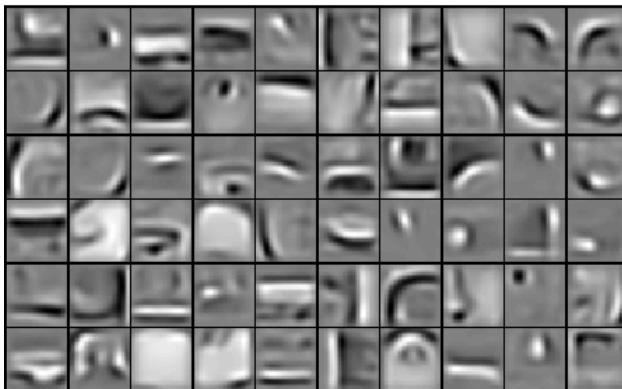

# Deep Belief Net on Face Images

# Learning of Object Parts

# Training on Multiple Objects

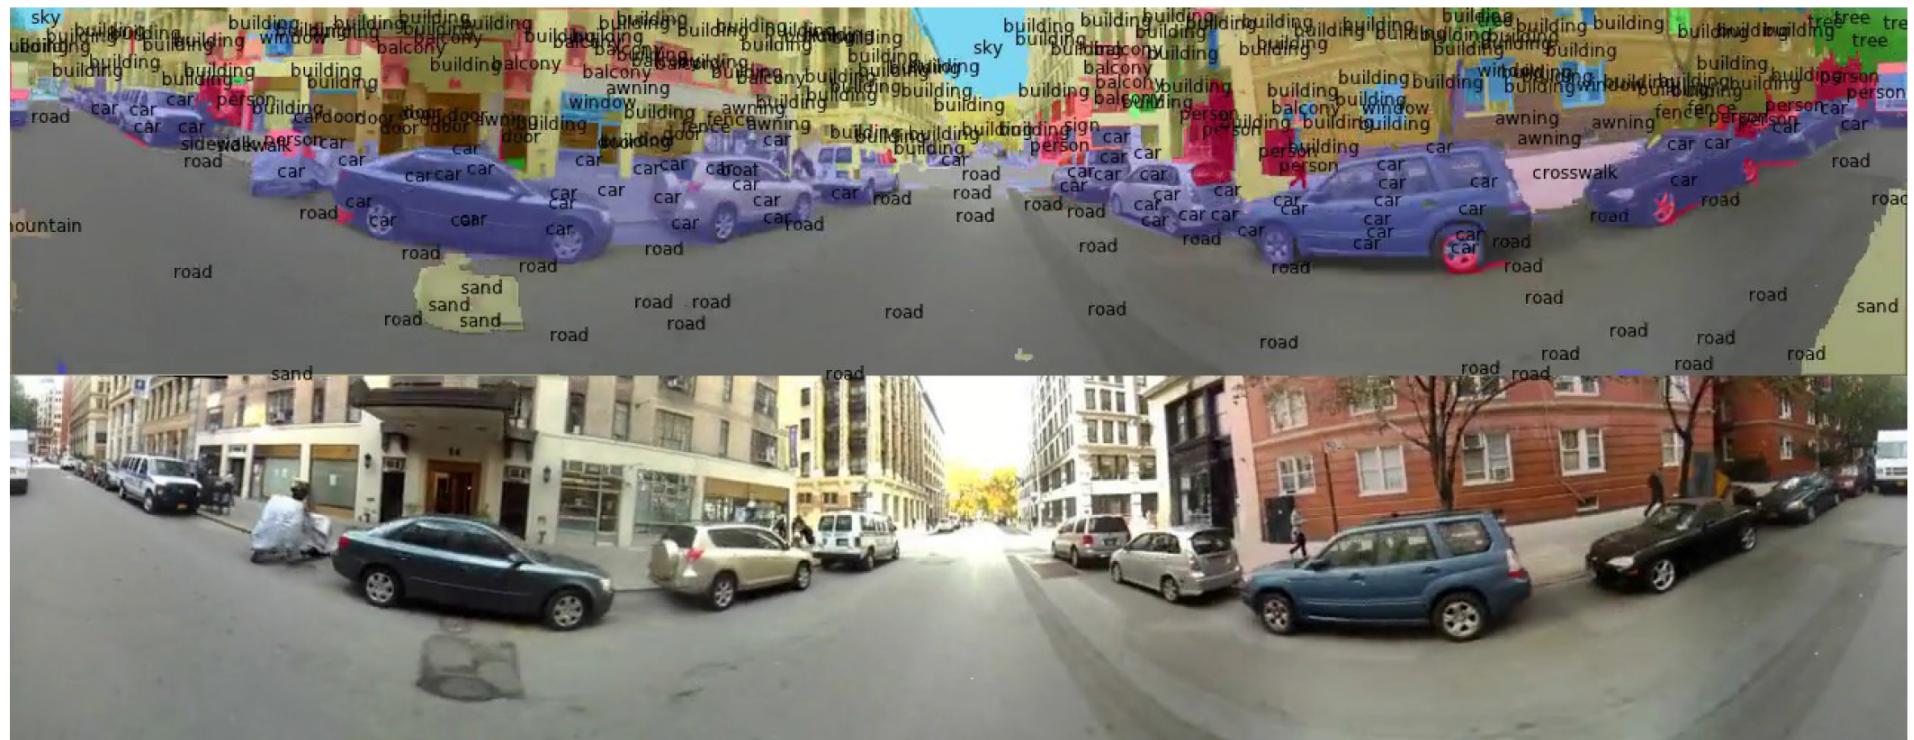

Trained on 4 classes (cars, faces, motorbikes, airplanes).

Second layer: Shared-features and object-specific features.

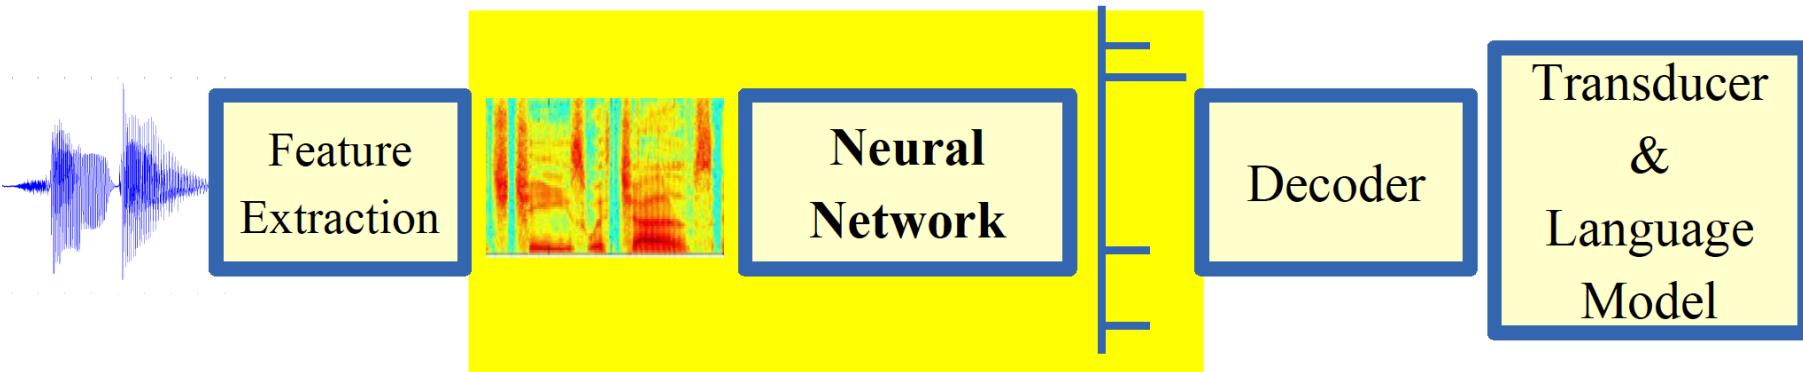

Third layer: More specific features.

# Scene Labeling via Deep Learning

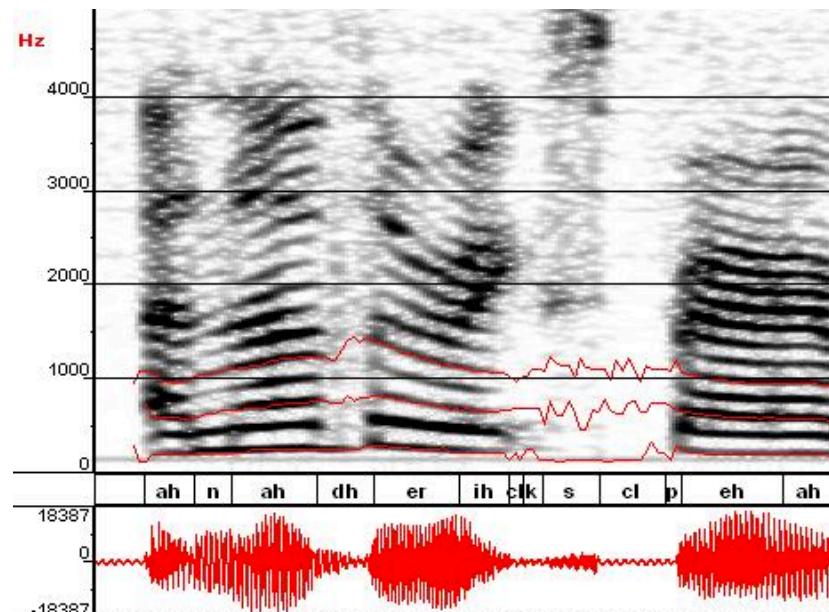

# Machine Learning in Automatic Speech Recognition

A Typical Speech Recognition System

ML used to predict of phone states from the sound spectrogram

Deep learning has state-of-the-art results

# Hidden Layers	1	2	4	8	10	12
Word Error Rate %	16.0	12.8	11.4	10.9	11.0	11.1

Baseline GMM performance = 15.4%

[Zeiler et al. "On rectified linear units for speech recognition" ICASSP 2013]

# Impact of Deep Learning in Speech Technology

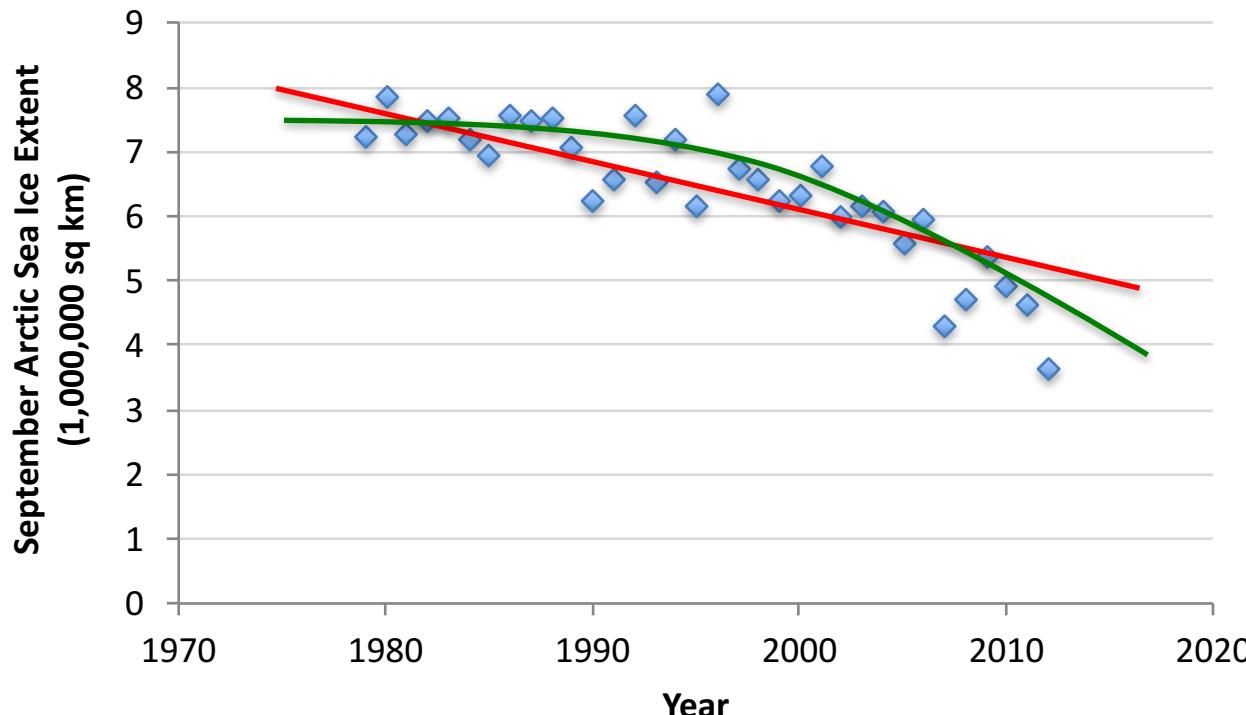

# Types of Learning

# Types of Learning

- **Supervised (inductive) learning**
  - Given: training data + desired outputs (labels)
- **Unsupervised learning**
  - Given: training data (without desired outputs)
- **Semi-supervised learning**
  - Given: training data + a few desired outputs
- **Reinforcement learning**
  - Rewards from sequence of actions

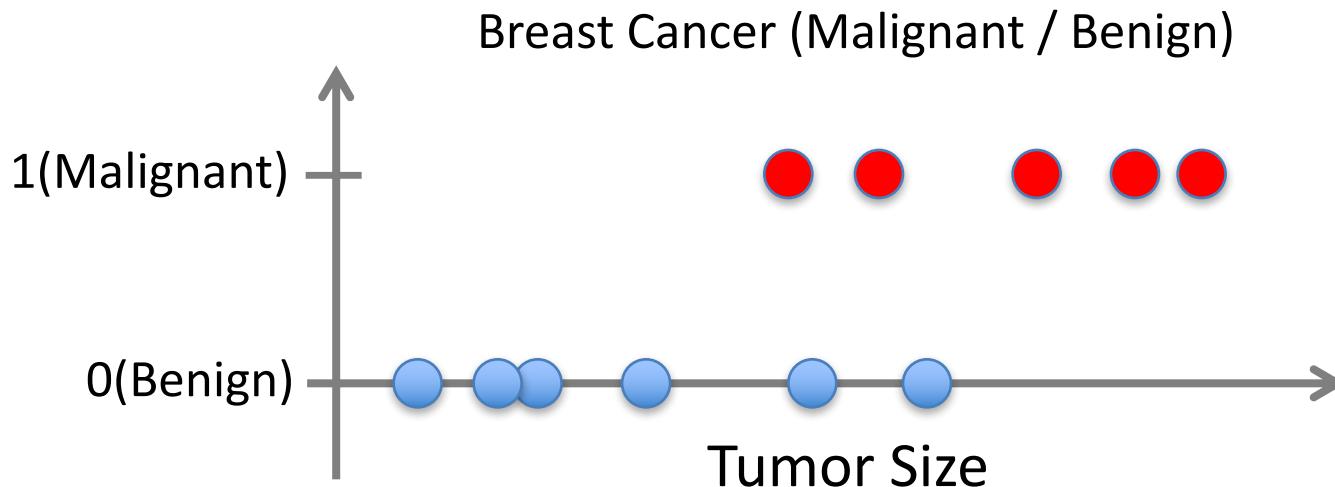

# Supervised Learning: Regression

- Given  $(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$
- Learn a function  $f(x)$  to predict  $y$  given  $x$ 
  - $y$  is real-valued == regression

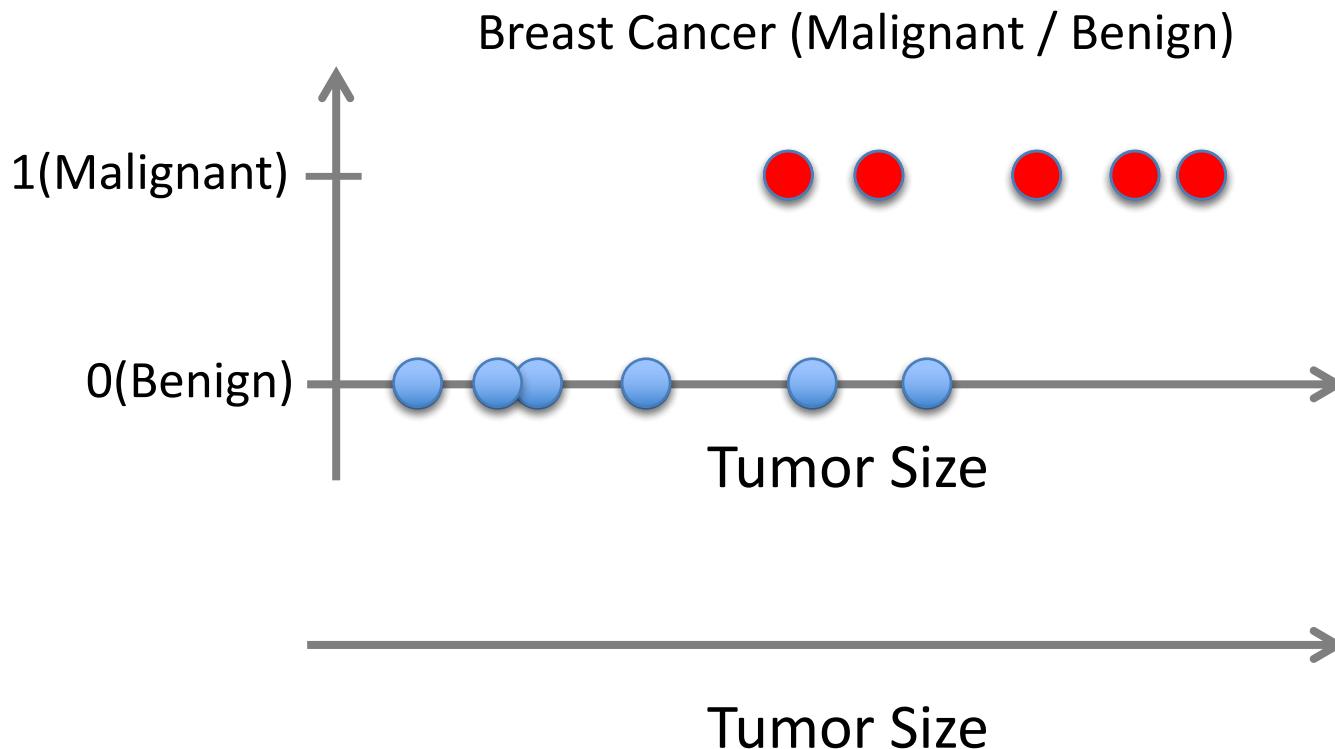

# Supervised Learning: Classification

- Given  $(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$
- Learn a function  $f(x)$  to predict  $y$  given  $x$ 
  - $y$  is categorical == classification

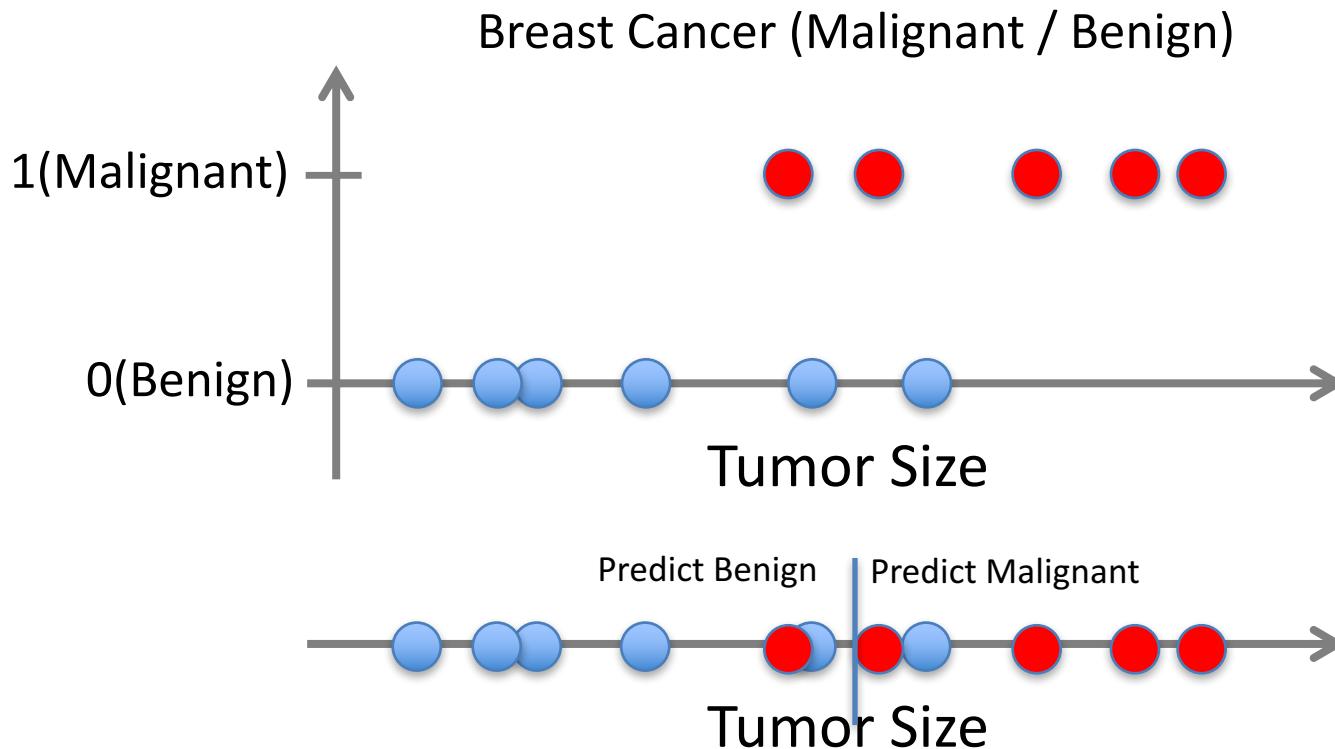

# Supervised Learning: Classification

- Given  $(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$
- Learn a function  $f(x)$  to predict  $y$  given  $x$ 
  - $y$  is categorical == classification

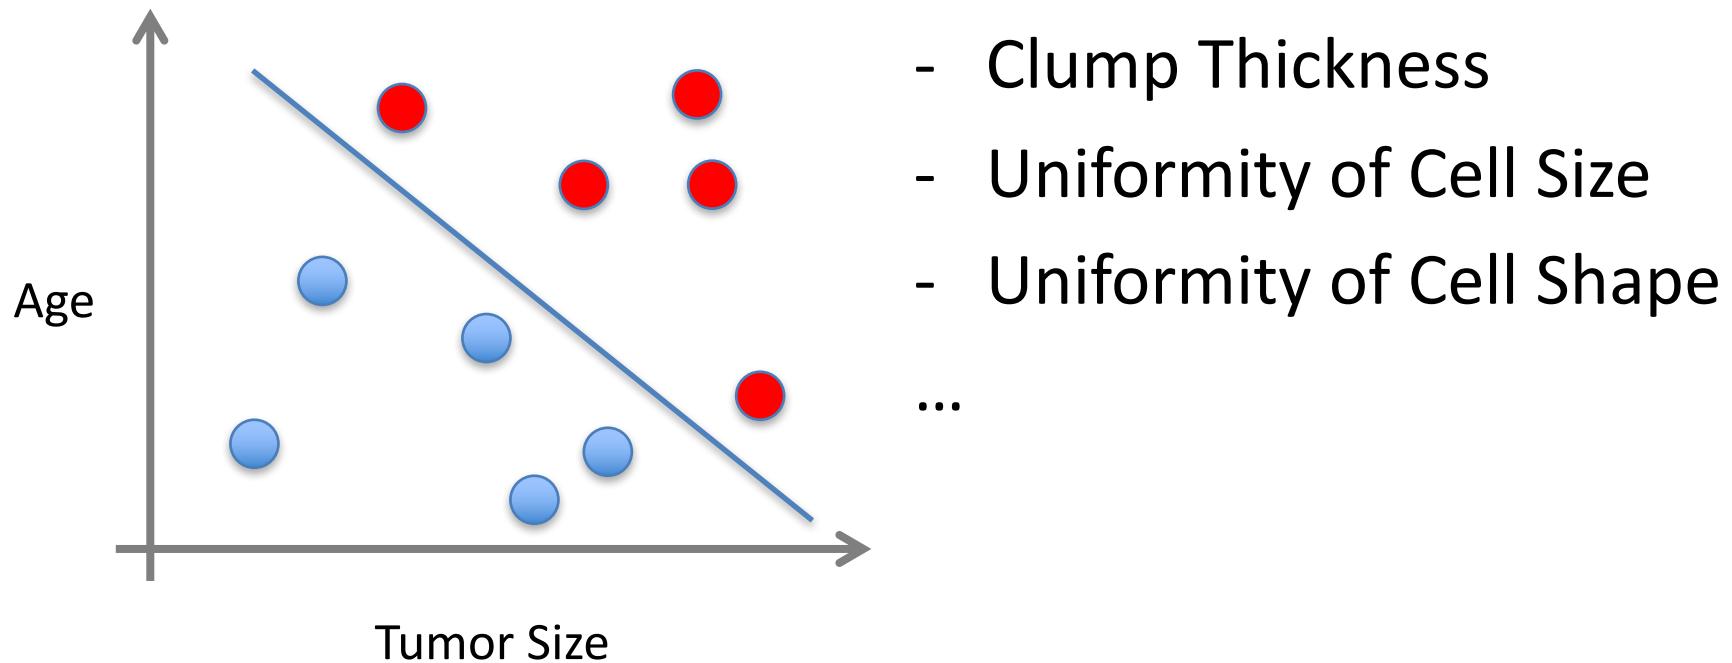

# Supervised Learning: Classification

- Given  $(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$
- Learn a function  $f(x)$  to predict  $y$  given  $x$ 
  - $y$  is categorical == classification

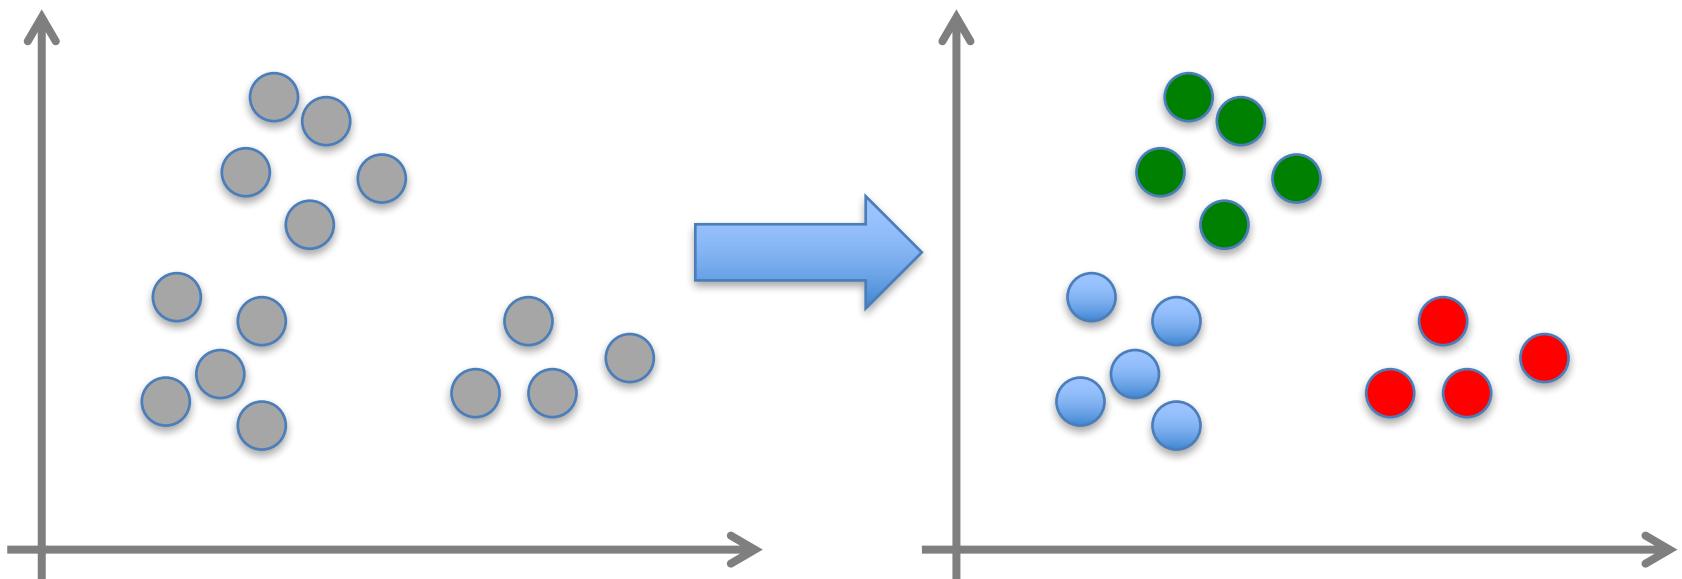

# Supervised Learning

- $x$  can be multi-dimensional
  - Each dimension corresponds to an attribute

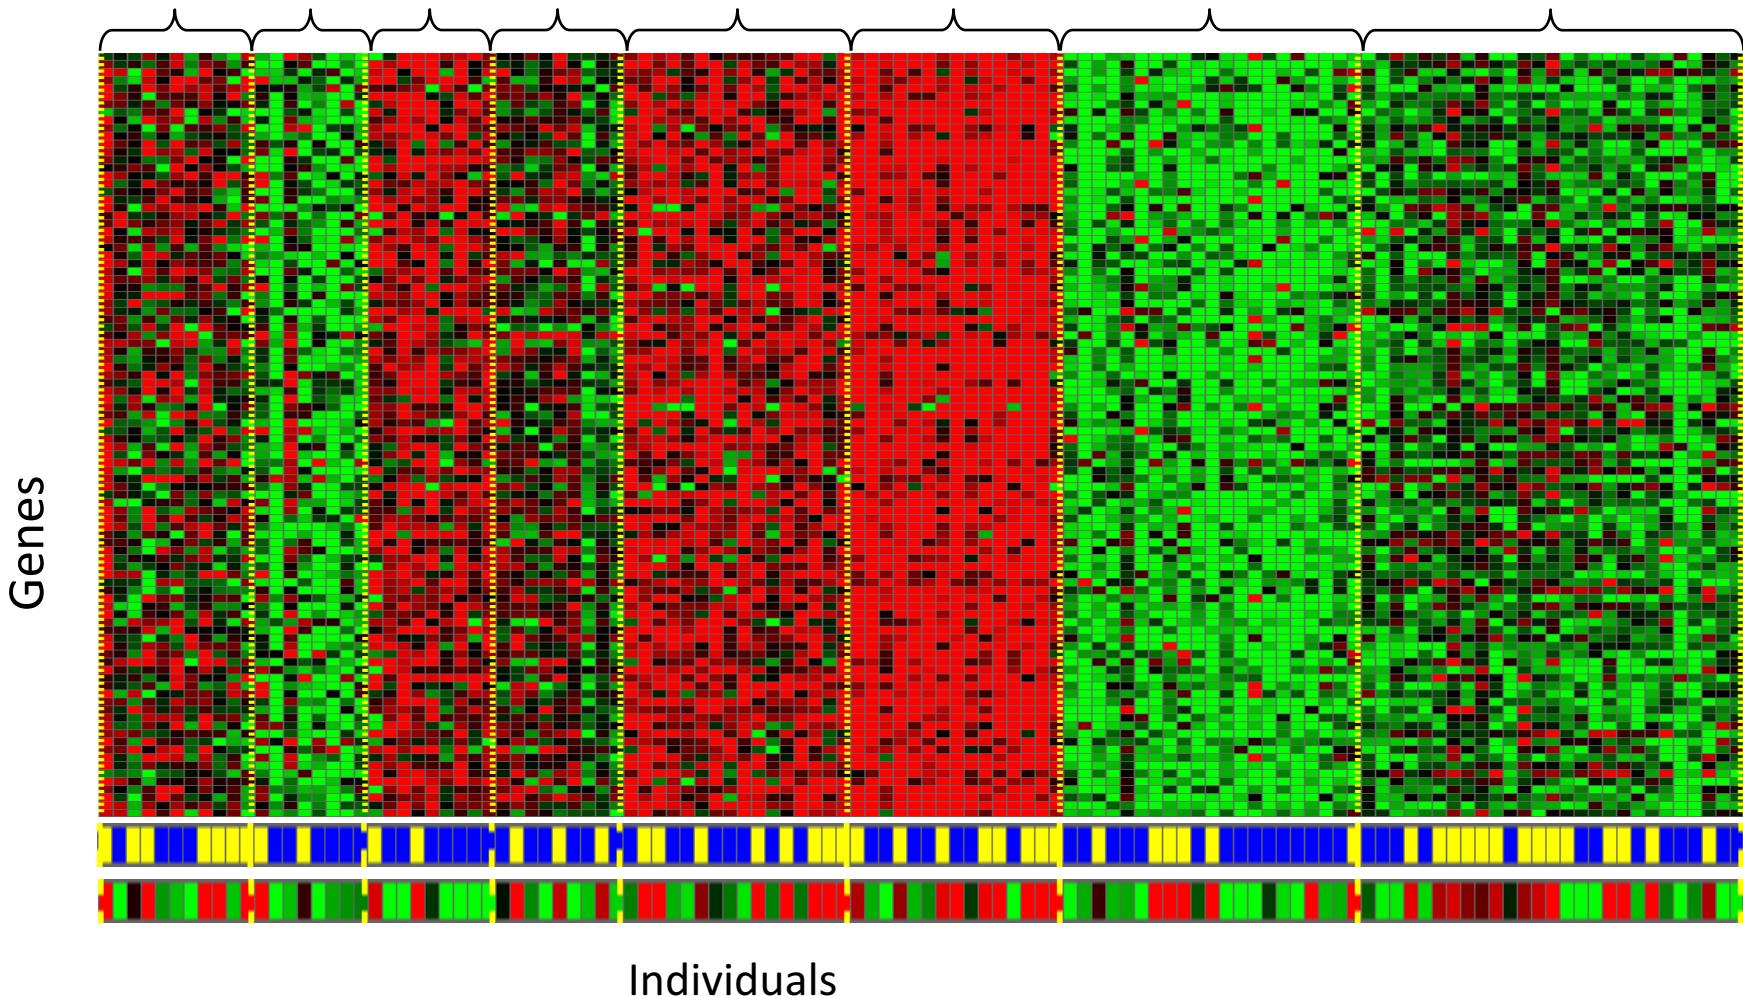

# Unsupervised Learning

- Given  $x_1, x_2, \dots, x_n$  (without labels)
- Output hidden structure behind the  $x$ 's
  - E.g., clustering

# Unsupervised Learning

Genomics application: group individuals by genetic similarity

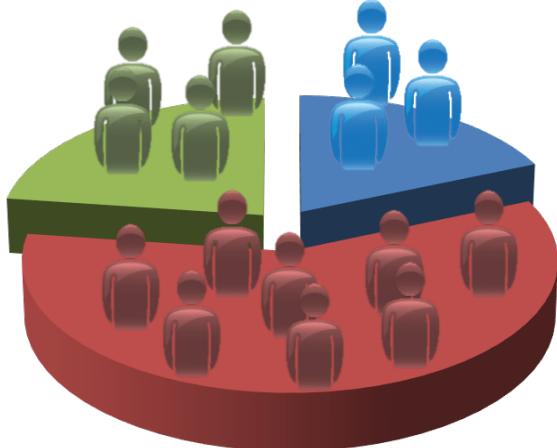

# Unsupervised Learning

Organize computing clusters

Social network analysis

Market segmentation

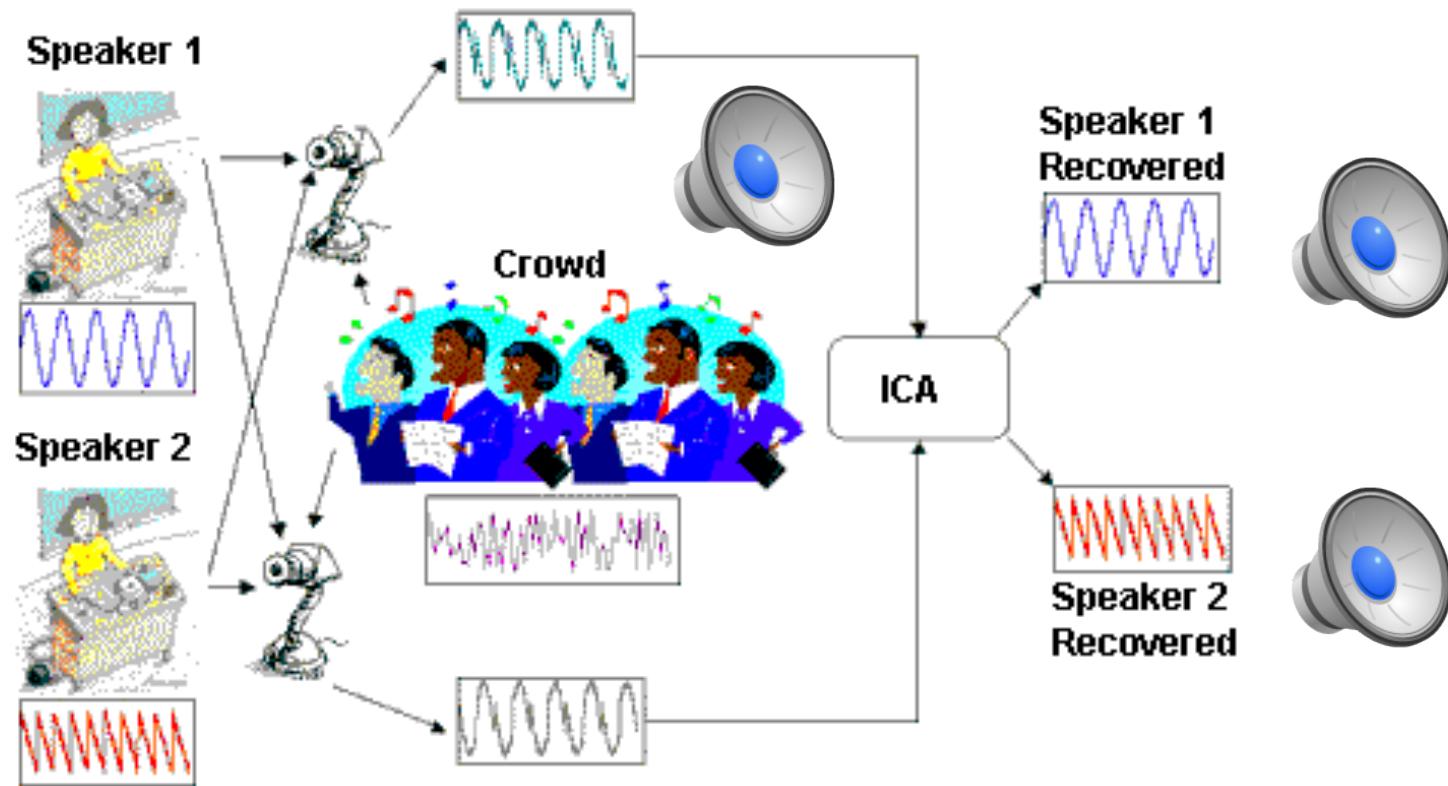

Image credit: NASA/JPL-Caltech/E. Churchwell (Univ. of Wisconsin, Madison)

Astronomical data analysis

# Unsupervised Learning

- Independent component analysis – separate a combined signal into its original sources

# Reinforcement Learning

- Given a sequence of states and actions with (delayed) rewards, output a policy
  - Policy is a mapping from states → actions that tells you what to do in a given state
- Examples:
  - Credit assignment problem
  - Game playing
  - Robot in a maze
  - Balance a pole on your hand
